

Eleanor & Dan

EXPERIENCE

Dan

Dan grew up helping farm his family's mixed cattle and arable farm. He spent a year managing the farm himself. Responsibilities included:

- Feeding & rearing 50 head suckler herd
- Arable operations for an annual crop cycle

Dan went on to complete a masters in Law and begin work as a paralegal. He is interested in specialising in environmental and human rights law. Alongside this ambition, he maintains a keen interest in farming and is inspired by the potential of regenerative agriculture for his family's farm and as a global movement.

Eleanor

Eleanor grew up on a mixed small holding, learning to care for sheep, chickens, bees and veggies. An interest in scalable solutions to climate & ecological collapse lead her to develop expertise in circular economy.

Her role at EMF was to assess and advise corporates on sustainable business transition. This included researching and communicating the need for regenerative production of food and biomaterials. A theoretical understanding of the potential of "regen" has lead to a desire to learn practical skills, apply regenerative principles and experience the challenges and rewards of farming.

PROFILE

We are a couple from the UK seeking work and mentorship in regenerative agriculture. We are a hard working, sociable and curious pair with particular interest in how farming can support healthy communities and ecosystems.

We are currently sailing from the UK to NZ. On arrival we are eager to get stuck into farming. We hope to learn the practical skills behind regenerative principles which we can take home to our respective careers and family lands.

EDUCATION & EMPLOYMENT

Eleanor

Ellen MacArthur Foundation
Senior Research Analyst
May 2020 - Oct 2023

University of Cambridge
Psychology
2016 - 2019

Dan

JMW Solicitors LLP
Paralegal
May 2022 - Oct 2023

University of Leeds
Philosophy & Politics
2015 - 2018
